

EchoClient::EchoClient

QpsClient::QpsClient

TcpClient::setConnection
Callback

```
graph LR; EC[EchoClient::EchoClient] --> TC[TcpClient::setConnection Callback]; QC[QpsClient::QpsClient] --> TC;
```

The diagram illustrates a shared callback mechanism. Two client classes, `EchoClient` and `QpsClient`, both implement the `setConnection` callback function from the `TcpClient` base class. The `EchoClient::EchoClient` and `QpsClient::QpsClient` constructors are shown on the left, with arrows pointing to the `TcpClient::setConnection Callback` box on the right, indicating that both clients inherit or implement this common interface.
