

TcpConnection::handleWrite

TcpConnection::shutdown

TcpConnection::shutdownInLoop

```
graph LR; A[TcpConnection::handleWrite] --> C[TcpConnection::shutdownInLoop]; B[TcpConnection::shutdown] --> C;
```

The diagram illustrates a function call relationship. Two source functions, 'TcpConnection::handleWrite' and 'TcpConnection::shutdown', are shown on the left. Arrows from both point to a target function, 'TcpConnection::shutdownInLoop', which is highlighted with a gray background. This indicates that both 'handleWrite' and 'shutdown' eventually lead to the 'shutdownInLoop' function.
